English (Professional Working)

# Wuanita Wanjiku

Firmware Development | Computer Programming | UX Research |  
UI/UX Design | Mobile Development

Nairobi

## Summary

I'll be completing my diploma in Information Technology at AkiraChix. My love for interacting with user-friendly interfaces has motivated me to grow in the technology field.

The most valuable lesson I have learned from AkiraChix has been the importance of research before moving into coming up with different tech-related solutions. I have enjoyed getting back to basics with sketches and prototyping in design before getting to design it in Adobe or Figma. My class in IoT has provided me with great insights for a future career in firmware development.

I continue to build skills in Mobile Development by taking up projects that aim at challenging my mastery of concepts. I hope to complete an internship that will provide real-life experience and grow my current technological skills.
